Open-Ended Responses

1. In what ways did your instructor make learning possible for you during the Summer I 2024 semester?

Comments
Made information about the class easily accessible.
Panos paid attention to how the students were taking to the material, noticed when we were confused, and reexplained. Through well–organized slideshows, helpful examples, and a genuine passion for statistics, he made this class very enjoyable.
He was overall a very good instructor who was able to explain things clearly and concisely. His ability to make classes more interesting through his use of examples was also a great boon for the class.
He was very good at explaining the intuition behind the topics and the actual methodology/procedure for using the topics. He was a very nice professor and clear lecturer. Would definitely recommend people take his classes.
He encouraged his students to participate in class and made sure to allow students to ask questions and went in depth answering them.
He was very kind and explained concepts well in such a short course period. Overall, great professor!
Was very clear about deadlines and class expectations. Thoroughly prepared students for all assignments and exams with multiple examples and practice materials. Allowed time for questions during each lecture and encouraged students to form a deeper understanding of course objectives, rather than just memorizing formulas.
He used student feedback to influence the way he taught

2. Which aspects of this course should be kept for future times this course is taught?

Comments
The professor was nice and helpful with the knowledge.
Lots of examples were helpful!
From my experience, nothing in the course needs to be changed.
Everything should be kept. I have never liked systems like Web Assign but I am confident that’s a department level decision.
The practice problems
Having multiple examples of problems during lecture, encouraging student participation through frequent questioning within the lecture, and providing background/proofs for formulas rather than just telling students what the formula is.
Practice problems offered before each test, opportunities for partial credit
