

Student Evaluation of Teaching, Spring 2025
Panagiotis Andreou, STOR 155-006 INTRO DATA MODELS & INFERENCE
Mode: IP (In Person)

Raters	Students
Responded	77
Invited	92
Response Ratio	83.7%

	Mean	Median	SD	N	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree
1. Overall, I learned a great deal from this course.	4.36	4.00	0.76	77	1.3%	1.3%	5.2%	44.2%	48.1%
2. The instructor treated all students with respect.	4.75	5.00	0.59	77	1.3%	0.0%	0.0%	19.5%	79.2%
3. The instructor encouraged students to participate in this class.	4.53	5.00	0.82	77	1.3%	2.6%	5.2%	23.4%	67.5%
4. The instructor saw cultural and personal differences as assets.	4.36	5.00	0.87	77	1.3%	0.0%	18.2%	22.1%	58.4%
5. I could really be myself in this course.	4.34	5.00	0.85	77	1.3%	0.0%	16.9%	27.3%	54.5%
6. In this course I had multiple opportunities to express my viewpoints and questions.	4.45	5.00	0.75	77	1.3%	0.0%	7.8%	33.8%	57.1%
7. The course challenged me to think deeply about the subject matter.	4.48	5.00	0.77	77	1.3%	1.3%	5.2%	32.5%	59.7%
8. The design of this course (e.g., its format, selected materials, assignments, exercises, quizzes, etc.) helped me better understand the subject matter.	4.31	5.00	0.92	77	2.6%	2.6%	7.8%	35.1%	51.9%
9. Overall, this course was excellent.	4.27	5.00	0.90	77	1.3%	2.6%	14.3%	31.2%	50.6%

11. The instructor held class meetings consistent with the official schedule published for this course.		
N	Yes	No
77	100.0%	0.0%

Open-Ended Responses

1. In what ways did your instructor make learning possible for you during the Spring 2025 semester?

Comments
He was always receptive to our needs as students, ensuring our questions were answered both inside and outside of class. He was always willing to explain the material so well and in different ways so that all students could understand the concepts. Overall he was very kind was excellent at teaching.
Panos is the BEST teacher I have had at Carolina so far. He genuinely cares about every single one of his students wellbeing and understanding of the material. Compared to a much older and experienced prof I had last semester in Calc, Panos did a WAY better job of explaining the material, being helpful in class and office hours, and helping us prepare for all of our exams. I am not a math person at all and had a C in my class last semester, this semester I currently have an A+ and genuinely I owe it to him being such a great teacher. I will recommend him to all of my friends who have to take Stats for the first time, I've never done this well in math before. He literally made going to class at 8am worth it.

Comments
Asked the students questions while teaching, which engaged the students
Clear and organized lectures.
Panos is one of the best teachers I've had at UNC. His lectures are always easy to follow and the slides are easy to refer back to. But most importantly, Panos is always willing to answer any questions and goes above and beyond when giving help for students. He will answer every single question a student has and ensures they understand the answer to their question. I attended his office hours every week because I learned so much from asking questions about the material. He will reteach the same material to students as many times as they need until they understand it. This course showed me how important it is for a teacher to truly help their students.
He was an extremely kind professor who understood that we have a lot on our plates and was always offering extra help when he could. He made sure each student was able to ask any questions and feel the best prepared going into each exam. Overall, he was an amazing professor.
He was very supportive and understanding of any questions that we had and would answer them well. Provided lots of good practice for us to get practice with concepts and problems and was very understanding and flexible to help structure the course so we wouldn't feel rushed to memorize everything. Really wanted us to understand the material.
Took feedback on the course often! Adjusted the course per feedback! Overall did a great job!
Made sure to encourage us to ask questions if we did not understand the subject matter. Encouraged participation and tried to explain statistics in a way that we could understand. He was also very understanding of our circumstances and tried to help us learn more as much as he could.
He walked through concepts slowly, incorporated practice problems into lecture
He opened his lectures for questions, which allowed me to get clarification if I had any confusion. He also went into. depth in lecture,s which allowed me to have time to digest the material, without feeling rushed.
My instructor did a very good job making learning engaging instead of tedious. He did a very good job of explaining each concept and not just using one day to explain harder concepts but rather expanded on them on multiple days.
By taking feedback from students.
I think that Andreou was a good teacher but he might be closer on the side of those types of people that are super smart but are not as good at explaining topics. Just sometimes when he taught I felt he was just so smart that he had a hard time dumbing stuff down for us. He really does care about his students tho and is a great person.
Panos was very open to people asking questions which was very helpful and he graded with detail. I was very pleased that he went over all of our midterms because it helped me to know why what I got wrong was wrong.
He was very clear in his lectures.
Mr. Panagiotis was always willing to explain problems and questions however many times I needed to fully understand the content.
Panos did a good job of listening to students feedback on how to improve the class.
He helped to provide us alternate activities or ways to better our grades and learning if we were not doing as we thought fair in the course.
He helped to make the class accomodaring for the different levels of statistics
He presented complex concepts clearly, using real–world examples and interactive discussions to enhance understanding.
He was very flexible and answered your questions.
The instructor created an engaging class and went through material thoroughly.
Panos had very good lectures and he did a good job at reviewing material. He also held office hours WF 1:30–2:30pm. He was extremely helpful during these office hours, helping students with questions, assignments, and studying, this is where I most benefitted from the class.
He posted class resurces before and after class so students who missed class had access. He encouraged question from students to be asked.
he encouraged students to work through the questions and gave us chances to work things out in class
Instructor Panagiotis Andreou made learning possible even though the class was hard. He explained things clearly, which made understanding easier. He answered questions with patience. He used simple examples to help us connect ideas. His feedback helped me see what I needed to fix. He made a tough class feel more doable.

Comments
He offered office hours that I attended and were very helpful.
Panagiotis Andreou would constantly try to engage with the class and provide many practical examples in class in order for his students to better understand the material.
I loved the way he teaches the class. Even though we are more than 60 students, he remembers everyone's name, includes everyone in discussions, and explains topics very clearly. He also gave us a lot of extra materials for the exams, which was very helpful. Most importantly, his teaching style and personality made the course easier and more manageable.
Lots of practice problems and days of review to ask questions and clarify concepts
Professor Andreou was very attentive in class and reviewed the material learned in the previous class at the beginning of each class. This was extremely helpful when going from a Friday class to the following Monday class. It helped to refresh my memory on things I had learned so that I had a good base for the material I was about to learn. Professor Andreou also held office hours regularly as well as additional office hours leading up to exams where he would answer any questions. He also posted practice exams and additional practice problems that were helpful in preparing for exams.
He engaged the class by asking questions and was always willing to help students.
Panos was available during office hours, and was always happy to answer questions in class as well. He encouraged participation and encouraged us to stop him if a concept didn't make sense.
Through lectures, and homeworks.
He was great, flexible and kind.
He provided many spaces to ask questions which was helpful when there was a topic we didn't understand or struggle with.
Our instructor made learning possible by providing us with lecture slides, working exam-type questions in class, and giving us plenty of resources to prepare for midterms and the final.
I didn't learn much in person because the new material was presented at a pace where I did not have time to sit down and process, and as a result of not understanding the material, I found myself disengaged and daydreaming. I suggest posting the lecture slides a day in advance so I have time to read over and take notes on the material beforehand, and use the class time instead to review or ask questions on concepts I didn't initially understand. Overall, I feel like the lecture slides were sufficient to understand the material, even if I don't use the physically written notes on the board in class. However, I believe I could benefit from extra problems to work through on the slides, so I have a better understanding of the computational process I must conduct to arrive at a solution. The class participation was fairly low, with the same few students asking and answering questions. You made a good effort to pause and ask whether the concepts made sense, but I felt like the class felt peer pressure not to raise their hands out of fear of being seen as "stupid". The class also took place at 8 am, when students are half awake, so a lack of socialization and engagement is to be expected.
Panos always asked for students to question him if they were struggling and took time to explain concepts. He always ensured that students understood those concepts. He also ensured that if you were struggling you would be rewarded for working hard, encouraging students to not give up in the class.
He was very open to suggestions about the course and also created opportunities for extra credit to boost people's grades. He also worked out examples on the board and provided us with slides and materials to do well on midterms.
He was extremely helpful in office hours and always willing to answer questions or explain concepts in varying ways to better suit class needs. He was also always listening to student feedback and created study guides and other resources for students' better understanding.
He made sure that we had ample opportunity to ask questions and learn from participating.
He made sure to ask the class if we had questions after he explained a new topic. He also had feedback forms posted to implement better ways to deliver teaching material to students who did not enjoy the way he was teaching.
Gave us many oportunities for help
He supported our learning by holding consistent office hours, taking time for questions during lecture, and spacing out homework so we could complete it thoroughly. He also provided strong prep materials for the midterms and final.
Panos posted very helpful practice sets and exams and he was very clear about his expectations. He was also always looking for student feedback and for what he can do to help us.

Comments
He had very good resources and slides and explained things in detail during lecture.
He taught the curriculum in an organized and timely way, and the course was accurate to the syllabus. He also held office hours to clarify our questions.
He was very understanding and receptive of student feedback. When students expressed that they were having difficulty with course concepts or challenged a piece of the syllabus, he was willing to make necessary changes that made learning in the class less stressful. Because I was less concerned with the way that assignments and assessments were being graded, I felt like I had more freedom to make mistakes when learning statistics for the first time.
Professor Andreou explained statistical concepts clearly and used lots of real-world examples, which made the material easier to understand. His patience and willingness to answer questions really helped me keep up.
We did weekly homeworks, had two midterms and a final, and had lecture Monday, Wednesday, and Friday.
provides help and help with hw
He held office ours and was flexible with due dates.
Prompt response to questions and allowing us to ask questions in the classroom and outside of the classroom via email and on homeworks.
He made learning accessible for all students as the lectures he held in class were informative, but he also posted all the slides online and provided a number of other resources.
Mr. Panos made learning extremely positive and interesting during his class. He gave many opportunities to speak out about any concerns and suggestions for the course. He was very kind to all student and accepted all questions during learning. He was very available and open during office hour appointments, he was there every time and maintained good communication throughout. Can't say enough good things about Mr. Panos.
He really encouraged participation in class and held consistent office hours.
He created good study guides and slides that helped me study for exams.
He deeply explained the topics in many different ways so there were many opportunities to understand. He made it clear he wanted us to succeed and made it possible. There was great resources posted, including practice and guides, as well as office hours.
He was very nice and encouraging, but did not really teach it in a way many people would pick it up the easiest.
He really helped me understand the material more when I would go to his office hours.
Professor Andreou did a good job of taking in students concerns and requests and adjusting accordingly.

2. Which aspects of this course should be kept for future times this course is taught?

Comments
I think the homework and his practice problems should be kept, along with all the material he used for practice.
I think the posted lecture slides and 2 midterms should be kept, as well as Web Assign I actually liked it because we had multiple attempts for each question and the "practice another" feature on it was so helpful. The practice midterms and cheat sheet were also so helpful bc I barely ended up needing to look at my cheat sheet since creating it actually was a form of studying.
Creating midterm and final practice
Everything
Everything should be kept, this course is one of the best I've taken.
All of it. I do not feel that there was much "fluff."
Having the practice problems and key formulas/ideas for each test really helped me review for the exams and consolidate the concepts
I think the course is planned well.
I think the main objectives of this course should be kept because they are the aspects of basic statistics. I thought that everything we learned was relevant to the class.

Comments
Practice problems, WebAssign hw, built-in review days
The open lecture and discussion format should be kept. Also, the review days before tests were helpful and should also be kept.
I think all aspects of the course should be kept for the future. The lectures were great, the homework was a very good reflection on what we were doing that week and the exams were very fair.
The open class-approach to the topics
I think in the future he needs to do more practice problems that reflect what we will do on exams and also there needs to be great grade distribution besides just the test. The test are such a large part of the grade and if he added in a participation grade it would 1 motivate him to have more students and in turn that would help students get better grades when they have incentive to go to class but it also rewards all the students that were actually showing up to class each day. And the grades would be less test heavy.
He should keep giving out the lecture slides, it makes it much easier to follow along. He should also keep providing practice midterms as they give a very good example of how the exam will look. He should also continue being passionate about statistics because it is very evident in his teaching!
I definitely would keep the open office hours, they helped a lot.
The constant patience and willingness to help students understand course content.
I think the homework's should be kept because those were helpful as well as the cheat sheet for tests.
I like the cheat sheets for exams and the review for the exams. I found both of these helpful to succeed in this course and it allowed me to better my grade. I think in the real world we will always have some kind of "cheat sheet" and this made going into the exams slightly less stressful.
The exams types
The syllabus, materials, and deadlines that were organized, making it easier to stay on track and manage workload.
The format of the assignments and tests
Homework and material review, and allowing many opportunities for questions.
His class structure where he teaches and reviews in class, along with weekly homeworks to practice what we learned. I liked webassign since i felt it was good practice. Also, the amount of exams is good.
Keep posting slides before class.
extra credit after midterms, once/twice a week homework
The clear explanations should be kept. The real-life examples made the lessons easier to understand. The step-by-step way of teaching helped a lot. Also, the quick and helpful feedback on assignments should stay. It made learning easier even though the class was hard.
The PowerPoint slides were very helpful with staying updated with notes.
The cheat-sheet and exam prep should definitely be kept. This prepared me a lot for the exams that were weighted so much.
He reviewed the course after exams and adjusted his teaching based on our feedback.
The continuation of review days as well as the practice exams/study guides.
I liked the way the course was divided into data basics, probability, inference statistics, and then regression. I think it was extremely helpful in understanding the content based on what I had learned before. I don't think I could've done hypothesis testing before probability. The structure was also helpful in making each of the midterms equal in terms of content amount.
Practice exams!
The setup of the class (lecture slides with examples to work through) was excellent, and the designation of two midterms and one cumulative final worked well!
Homeworks
I think the slides are helpful.
The homework was manageable and helped me understand the class material a lot better.

Comments
I enjoyed how we are able to use a "cheat sheet" on our midterms and final, since so much of this course revolves around being able to apply certain formulas and choosing which formulas to use in order to solve a problem.
I felt like the lecture slides were very helpful, especially for students that don't show up in person. It has enough information to catch you up and explains concepts well. I felt like the practice midterms were useful, but I would like for them to include more questions so I can further assess my understanding of the topics. Additionally, I feel like the extra credit opportunities and midterm drop in the case we did well on the final should be kept. Personally, I did poorly on the second midterm and thought I was going to end up with a letter grade of B- even if I scored perfectly on the final, but dropping the midterm gave me motivation to try harder on the final because I could still earn an A or A-, given that I performed well on the final.
I felt like Panos progressed at a very reasonable rate, never too fast or too slow.
I think the cheat sheet aspect of this course was helpful as Statistic's has a lot of formulas and nuances that can be hard to memorize.
Office hours as well as the practice problems and condensed notes were extremely helpful.
Everything just incorporate more practice questions.
I enjoy the shorter homeworks that are due at the end of the week so it gives us time to ask questions about doubts we have and also gives us room to do the questions when we have time.
The practice midterms
The exam format should definitely be kept—it was clear and fair. Also, using Cengage for homework was really effective and made the assignments more manageable.
I really like the practice sets and exams and providing days leading up to exams just for review. I particularly liked how we were given practice exams and then we reviewed them in class leading up to the exam.
The slideshows and homework structure.
The practice midterms and office hours are useful
Savannah made learning easier by patiently walking through tough problems step-by-step during recitations. Her clear explanations and encouragement made a big difference in my understanding. Also we were allowed to use a cheat sheet for exams, and technology for calculations which was super helpful and refocused my attention to actual statistical concepts without worrying about remembering formulas.
All aspects should be kept.
everything is great love panos
Practice exams and formula sheets were very helpful.
I think the ability to use a cheat sheet on exams with formulas and other notes was extremely helpful and the actual making of the cheat sheet itself was a good way to study, so that is something that should be kept in the future.
This course should keep the open discussion, writing on the board for explanations, and help with any WebAssign issues. Another great thing I loved is the review days and the practice tests and problems for review.
Practice problems in class and participation.
The review sessions should be kept.
all of them, I learned a lot through the practice on webassign, even if it was difficult and sometimes inaccurate. The number of lectures is good, I feel I had adequate time to learn the material.
More practice problems, showing an equation and explaining what it means and when it is used.
Cheat sheet for midterms and final.
I think the Webassign should be kept the same because it allowed for good practice and learning.
